

Carbon Reduction Plan

Supplier name: Acandis GmbH

Publication date: April 2026

Commitment to achieving net zero

Acandis GmbH is committed to achieving net zero greenhouse gas emissions by 2050.

Baseline emissions footprint

Baseline year: 2025

The company has established an initial greenhouse gas emissions baseline for 2025 in line with the GHG Protocol. The baseline covers Scope 1, Scope 2 and relevant Scope 3 categories and will be refined over time as data quality continues to improve.

The company's primary environmental impact is expected to arise from purchased energy, supply chain activities, and logistics processes.

The company is implementing processes to collect, validate, and report emissions data.

The company is working to collect the required emissions data, including Scope 1, Scope 2 and relevant Scope 3 categories (upstream and downstream transportation and distribution, waste generated in operations, business travel and employee commuting), within the next 12 months.

Baseline year emissions:

Emissions	Total (tCO ₂ e)
Scope 1	373
Scope 2	353
Scope 3 (included sources)	2.617
Total emissions	3.343

Current emissions reporting

Reporting year: 2025

Emissions	Total (tCO2e)
Scope 1	373
Scope 2	353
Scope 3 (included sources)	2.617
Total emissions	3.343

Emissions reduction targets

In line with its commitment to achieving net zero by 2050, the company has established its initial emissions baseline and is developing its reduction pathway. In the short term, the company focuses on improving energy efficiency, increasing the use of renewable energy, and enhancing emissions transparency.

Following completion of the 2025 baseline, the company will define interim measurable emission reduction targets and a detailed decarbonisation pathway aligned with its net zero commitment by 2050.

Carbon reduction projects

Completed carbon reduction initiatives:

The company has implemented several measures to improve energy efficiency and reduce its environmental footprint. These include energy-efficient building standards, the use of renewable energy where applicable, and energy recovery systems in operational environments such as cleanroom processes.

In addition, operational processes are continuously reviewed and optimized to improve resource efficiency and reduce energy consumption across manufacturing and supporting activities. The company also focuses on maintaining efficient production and logistics processes to avoid unnecessary resource use and reduce emissions intensity.

Future carbon reduction initiatives:

- Establishing a comprehensive emissions tracking system covering Scope 1, Scope 2 and relevant Scope 3 categories
- Improving data quality by transitioning from estimates to activity-based emissions data over time

- Increasing transparency on emissions and environmental performance
- Identifying and implementing further energy efficiency improvements in operations and facilities
- Evaluating additional renewable energy opportunities
- Enhancing supplier engagement to improve environmental performance across the supply chain
- Optimizing logistics and transportation processes to reduce emissions associated with distribution activities

The company aims to further enhance data quality, expand emissions coverage and refine its decarbonisation roadmap within the next 12 months.

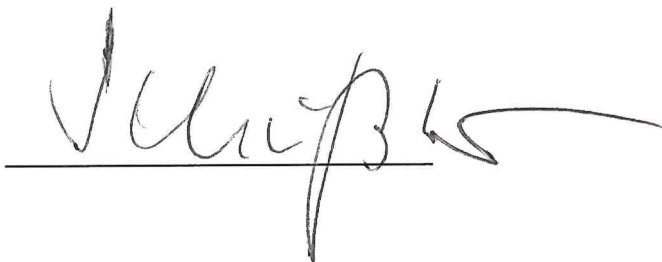

Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standards. This Carbon Reduction Plan has been reviewed and approved by senior management and signed off at director level.

Signed on behalf of the supplier:

Name: Dr. Andreas Schüssler

Function / Title: CEO, Acandis GmbH

A handwritten signature in black ink, appearing to read 'A. Schüssler', is written over a horizontal line. The signature is stylized and includes a long horizontal stroke extending to the right.
